

Tabor Electronics announces new Chief Operating Officer

The significant increase in demand for Tabor's new product lines necessitate an operational reorganization to enable the company's ongoing expansion worldwide

January 2021 Neshar, Israel – Tabor Electronics names Boaz Agur as its new COO, just 6 months after announcing Mark Elo as its first VP since Ron Glazer was named CEO. The announcement is a direct result of Tabor's continuous growth and increasing demand for its two recent product lines launches - the All-New Lucid and Proteus series.

Boaz, who joined Tabor only two years ago, as its Operation & Supply Chain Director, served as a key player in Tabor's endeavor to meet the increasing demand for its new product lines, while maintaining flowless supply chain and customers' support, during the ongoing challenging COVID-19 pandemic period.

Boaz has over 23 years' experience in the High-Tech industry, from R&D engineer, through various management positions in R&D, worldwide technical support, manufacturing, and operations. During his career, Boaz gained extensive experience in operations in various companies, both in the high-tech and the industrial sectors, with products of a multidisciplinary nature, emphasizing uncompromising quality issues, JUST IN TIME & LEAN production and various manufacturing and collaborative areas. Prior joining Tabor Boaz held similar positions at Shenpaz and Gidel. Boaz holds academic degrees in Electrical & Business Management.

Ron Glazer commented: "COVID-19 hasn't stopped our production department or our R&D. Though we had to take the necessary steps to ensure our workers health and safety, we didn't stop manufacturing or designing our next generation for a minute. Boaz is a valuable team player, an extraordinary professional and experienced manager." Ron added: "I wish Boaz great success in his new and challenging role, and believe he is the right man at the right time for this role. As hope grows for the end of the pandemic with the coming of vaccines, we plan to move forward at even a faster growing pace to fulfill our market potential."

Boaz Agur: "I appreciate the boards' trust in me. In fulfilling the position of COO, I will bring into play my abilities, experience, and knowledge from year's in the high-tech industry. I'm dedicated to the companies' objectives and will strive to bring our customers value."

About Tabor Electronics

Established in 1971, Tabor Electronics has become a world-leading provider of high-end signal sources, featuring: RF, pulse, function and arbitrary waveform generators/transceivers, high-voltage amplifiers, waveform and modulation creation software. Tabor has earned global recognition for its highly skilled workforce and innovative engineering capabilities. In addition to offering a full range of self-branded instruments, Tabor is also a world-class OEM that private-labels a variety of products for industry leaders. Technologically advanced, featuring the highest levels of performance, reliability, and most importantly, price-competitive, Tabor's products are sought-after in a diverse array of applications.
