

100MHz Pulse Generator

DISCONTINUED

MODEL 8600

- Two independently programmed output channels with standard ECL/TTL auxiliary outputs (Channel B optional)
- High output amplitude level of 10Vp-p, (open circuit), in less than 2ns
- High-Accuracy, high-resolution digital settings, over exceptionally wide ranges. Pulse width/delay are set with 1 ns increments to 79,999ns
- Auto-calibration of output period with the built-in counter. Basic period accuracy is controlled to within 0.1% by an internal counter

- Complete pulse error detection for error-free operation
- Pulse output modes include single, double, delayed, and pulse complements
- Extremely low jitter pulse width and delay specification
- Complete GPIB programmability
- 30 storable, non-volatile, front panel set-ups are available for front panel or bus operation
- Standard built-in universal counter timer measures signals up to 150MHz

Tabor takes pride in providing the ultimate in pulse generator performance. Now available from Tabor, 100 MHz programmable pulse generator.

Model 8600 offers exceptional features, accuracy and value unsurpassed by any other pulse generator in this class. Its performance, programmability and economy assures continuing usefulness for many years to come.

Versatility

Using the latest in microprocessor technology, the Tabor 8600 provides reliability and ease of operation in either manual or GPIB-IEEE 488 modes. Featuring a non-volatile memory, Model 8600 is capable of storing 30 complete front panel set-ups giving exact duplication of complex tests. Last set-up before power shut down is always retained. Modification of parameters is digitally set over exceptionally wide ranges:

- **Period** - set from 10nS to 1.999S.
- **Amplitude** - set from .5V to 10Vp-p within a window of 10V.
- **Pulse Width** - set from 5nS to 3.999MS.

- **Delay** - set from 0nS to 3.999mS.
- **Fixed Duty Cycle** - set from 1 % to 95%.

Model 8600 may be used as a stand alone -asynchronous generator. Consequently, synchronization to an independent external signal is achieved using one of its built-in triggering modes. Output may then be select between a single pulse, a gated burst or a burst of pre-selected number of output cycles. Alternately, An internal trigger stimulant, having a controllable period, is provided as substitution for an external signal.

Precision

Model 8600 employs a built-in frequency counter. This counter is incorporated in an internal closed loop which constantly monitors the output frequency. When deviation from programmed frequency is sensed, the counter instantly sends correcting data to the microprocessor thus, enhancing the basic frequency accuracy to 0.1% -an uncommon figure in such a class of instruments. This counter is also utilized in an internal self calibration routine which corrects the basic accuracy

of the VCO to better than 1 %. The self calibration routine is front panel selectable and is usable anytime. Alternately, the instrument may be used as an independent 7 digits universal reciprocal counter/timer which is capable of measuring, to a high degree of accuracy and resolution, three external parameters:

- **Frequency:** from 20Hz to 150MHz
- **Period averaged:** from 7 nS to 50mS
- **Pulse width averaged:** from 50 nS to 1S.

Expandability

Standard Model 8600 is supplied with one main output (Channel A) delivering full amplitude and performance and one auxiliary output (AUX A) supplying a fixed voltage level of either TTL or ECL. Optional second output (channel B) is field installable. Only period is common to both channels. All other parameters are independently set.

Service and Support

Beyond providing precision Test & Measurement instruments, Tabor Electronics provides unparalleled service and support, and is continuously finding new ways to bring added value to its customers.

Our after-sales services are comprehensive. They include all types of repair and calibration, and a single point of contact that you can turn to whenever you need assistance. As part of our extensive support, we offer individualized, personal attention Help Desk, both online and offline, via e-mail, phone or fax.

Tabor Electronics maintains a complete repair and calibration lab as well as a standards laboratory in Israel and USA. Service is also available at regional authorized repair/calibration facilities.

Contact Tabor Electronics for the address of service facilities nearest you.

Applications

For expert technical assistance with your specific needs and objectives, contact your local sales representative or our in-house applications engineers.

Manuals, Drivers, and Software Support

Every instrument comes equipped with a dedicated manual, developer libraries, I/V drivers, and software. However, if your specific manual is lost or outdated, Tabor Electronics makes it possible to log-on to its Download Center and get the latest data "in a click".

Product Demonstrations

If your application requires that you evaluate an instrument before you purchase it, a hands-on demonstration can be arranged by contacting your local Tabor Electronics representative or the Sales Department at our Corporate Headquarters.

Three-year Warranty

Every Tabor Electronics instrument comes with a three-year warrantee. Each one has full test results, calibration certificate, and CD containing product's manual and complete software package. Our obligation under this warranty is to repair or replace any instrument or part thereof which, within three years after shipment, proves defective upon examination. To exercise this warranty, write or call your local Tabor representative, or contact Tabor Headquarters and you will be given prompt assistance and shipping instructions.

The measure of perfection

Specifications 100MHz Pulse Generator

Model 8600

WAVEFORMS

Pulse, Pulse complement.

OUTPUT MODES

Single, Delayed, Double,
Fixed duty cycle, Disabled.

OUTPUT CHANNELS

Two Channels. B Channel
optional. Only period and
trigger modes are common.
Other parameters are
independently set.

PULSE PARAMETERS (CHANNELS A&B)

PERIOD

Range: 10.0ns to 1.999s.
Resolution: 3 1/2 digits
(1999 counts at full scale).

ACCURACY

Continuous: 20ns to 1.999s, $\pm 0.1\%$ of full
scale. 10ns to 19.9ns, $\pm 2\%$
of programmed value ± 0.2 ns.
Gated, and Burst: $\pm 2\%$ of programmed value
 ± 0.2 ns (within 1hour
following the self calibration
sequence).
Duty Cycle: 1% to 99%
(limited by 5ns off time).
Jitter (Peak-Peak): 0.1% ± 50 ps.

WIDTH, DOUBLE PULSE

Measured at 50% of amplitude.

RANGE

**Pulse Width,
Double Pulse:** 5ns to 79.999 μ s
(with 1ns increments);
80.0 μ s to 4.000s.
Delay: 0ns to 79.999 μ s
(with 1ns increments);
80.0 μ s to 3.999s.

Resolution: 5 digits maximum to
79.999 μ s. 4 digits maximum
from 80.0 μ s to 3.999s.
Accuracy: $\pm 1\%$ of programmed
value ± 2 ns.

MAXIMUM JITTER (Peak-Peak)

Below 1 μ s: $< 0.1\% + 50$ ps.
1 μ s to 10 μ s: 0.05%.
Above 10 μ s: 0.005%.

FIXED DUTY CYCLE MODE

Mode: Output pulse is automatically
adjusted to the programmed
duty cycle parameter.
The programmed pulse width
parameter is ignored.
Range: 1% to 95%.
Accuracy: $\pm (3\%$ of programmed
value + 2ns).

OUTPUT LEVELS (CHANNELS A&B)

High Level Range: -4.50V to +5.0V, into 50 Ω ;
-9.0V to +10.0V, into open
circuit.

Low Level Range: -5.0V to +4.5V, into 50 Ω ;
-10.0V to +9.0V, into open
circuit.

Amplitude: 0.5V to 5V, into 50 Ω ;
1V to 10V, into open circuit.
3 digits.

Resolution: 3 digits.
Accuracy (1KHz): $\pm (2\%$ of programmed value
+ 2% of amplitude + 20mV).

Output Protection: protected against continuous
short to case ground.

PULSE PERFORMANCE (CHANNELS A&B)

Transition Times: 2ns.
Aberration: $< 5\%$.
Impedance: 50 Ω , $\pm 2\%$.

SYNC OUTPUT

Output Impedance: 50 Ω , $\pm 2\%$.
Output Level: 1V minimum, into 50 Ω ;
2V minimum, into open circuit.

Transition Time: 1ns typical.
Duty Cycle: 10ns to 1999ns, 50%;
Above 2000ns,
Pulse width varies from
100ns to 1 μ s.

AUXILIARY OUTPUTS (AUX A & B)

Period: 10ns to 1.999s.
Operating Mode: ECL or TTL output, front
panel selectable.
Output Impedance: 50 Ω , $\pm 3\%$.

Pulse Parameters: Share parameters with the
main outputs except
amplitude.

Output Modes: Share modes with the
main outputs.

Output Level: TTL, 0/2.5V, into 50 Ω ;
0/5V into open circuit;
ECL, -0.9V to -1.7V,
into 50 Ω .

Transition Times: TTL, 4ns; ECL, 3ns.

TRIGGERING CHARACTERISTICS

EXTERNAL TRIGGER MODES

External Trigger: Each input cycle generates a
single output pulse.

External Burst: As in external trigger for a
programmable number of
pulses.

Gated: External signal enables
generator.
First output pulse
synchronous with the active
slope of the gating signal.
Last pulse always complete.

Input Impedance: 10k Ω , $\pm 5\%$
Trigger Level: -10.0V to +10.0V, adjustable.
Trigger Sensitivity: ± 500 mVp-p.
Slope: Positive or Negative going
leading edge, Selectable.

EXTERNAL REPETITION RATE

Triggered: 100MHz maximum
Gated: 25MHz maximum
Burst: 25MHz maximum

INTERNAL TRIGGER MODES

Internal Trigger: An internal timer repeatedly
generates a single output
pulse. Trigger period is
adjustable

Internal Burst: As in internal trigger for a
programmable number of
pulses.

Manual: Simulates an external trigger
or gating signal.

Manual Burst: Simulates an external trigger
stimulant.

Specifications 100MHz Pulse Generator

Model 8600

INTERNAL TRIGGER PERIOD

Triggered, Burst: Continuously adjustable from 0.05 ms to 1000s.

Burst Count Range: From 2 to 65,500.

DELAY TRIGGER MODES

Measured from trigger input to SYNC out

Triggered: 50ns, ± 10 ns;

Gated: 65ns, ± 10 ns;

Burst: 65ns, ± 10 ns.

COUNTER CHARACTERISTICS

GENERAL

Input: Via EXT FREQ /TRIG IN BNC.

Measurement Technique: Reciprocal frequency measurement.

Gate Time: 1s, NOMINAL.

Sensitivity: 500mVp-p.

Dimensions: one digit exponent.

FREQUENCY MEASUREMENT

Range: 20Hz to more than 150MHz.

Resolution: 7 digits, regardless of frequency.

Accuracy: $\pm(0.01\% + 1 \text{ LSD})$.

Detectable

Pulse Width: 5ns minimum.

PERIOD AVERAGED MEASUREMENT

Range: 7ns to 50ms.

Resolution: 7 digits, regardless of period.

Accuracy: $\pm(0.002\% + 1 \text{ LSD})$.

PULSE WIDTH AVERAGED MEASUREMENT

Range: 50ns to 1s.

Max Repetition

Rate: 10MHz.

Resolution: $\frac{100\text{ns}}{\sqrt{F}}$

Accuracy: where F = frequency in Hz
 $\pm(0.002\% + 3\text{ns} + 1 \text{ LSD})$
(for square shaped signals).

Dead Time between measured pulses: 50ns.

GPIO INTERFACE

Programmable controls:

All front panel controls except POWER switch.

Subsets

Implemented:

SH1 ,AH1 , T6, TE0, L4, LE0, SR1, RL1, PP2, DC1, LJ71, C0.

Data Output

Format:

Fixed output format consisting of 10 or 14 ASCII characters plus terminators. ASCII characters lower or upper case. ASCII characters smaller than 20 HEX (32) are ignored except CR (OD HEX).

Data Input Format:

ASCII characters lower or upper case. ASCII characters smaller than 20 HEX (32) are ignored except CR (OD HEX).

Service Request:

Selectable for illegal commands, errors, pulse errors.

String Termination:

Selectable CR, LF, EOI or combination of all.

GENERAL

Display: 7 digits, 7 segment LED's 0.5" high.

Power: 115/230Vac, $\pm 10\%$, 50 or 60Hz, 150VA max.

Stored Set-ups: 30 complete sets of front panel set-ups. Storage guaranteed for 3 years.

Operating

Temperature: 0 to 50°C, ambient.

Specified

Accuracy: +20°C to +28°C.

Storage

Temperature: -40°C to + 70°C.

Dimensions: 5.5" x 11.8" x 13.6" (HxWxL).

Rack Mount

Dimensions: 7" x 19" (HxW).

Weight: Approximately 16Lbs.

EMC:

Reliability: MTBF per MIL-HDBK-217E,

25°C, Ground Benign

Safety: Designed to meet

IEC 1010-1,

UL 3111-1,

CSA 22.2 #1010

Workmanship

Standards: Conform to IPC-A-610D

Supplied

Accessories:

Power Cord, CD containing Operating Manual and developer libraries.

Warranty:

3 years standard.

ORDERING INFORMATION

MODEL 8600

100MHz Pulse Generator

OPTIONS

Option 1:

Channel B. Independent High/Low Levels, Pulse Width, Pulse Delay, Single/Double Pulse, Normal/Complement.

ACCESSORIES

Rack mount:

19" Single Rack Mounting Kit

Note: Options must be specified at the time of your purchase.
